

Implementing Design Thinking + Charrette Process in the Classroom

Deb Domres . Katharine Leigh . Amy Robinson . Cassie White

Colorado State University

26 February 2016

Welcome + Introductions

- Draws upon tools in both design and business venues, creating a framework that integrates user needs, powerful ideas, and enterprise success (Lockwood, 2009)
 - **Gear 1:** aims to achieve deep user understanding and establish a context for innovation and value creation – to gain context – what users do and how they feel
 - **Gear 2:** focuses on concept visualization as the goal - implements tools during the strategic creation to explore a broad set of solutions. Creative tools, such as prototyping and ideation, enrich and generate novel solutions.
 - **Gear 3:** identifies through analysis which strategies will drive success, prioritizes activities in delivering those strategies, and defines how strategies fit together strategically, operationally, and economically (Lockwood, 2009)
- Through this, “broad concepts [align] with future realities through strategy formulation and design of the business model itself” (p. 40)

Three Gears Theory (Fraser, 2009)

Goal 1: Share idea of a charrette to enhance your ability to discover and visualize ideas to make your ____ better

Goal 2: Provide structure behind ideas

Goal 3: Share our charrette experience

Goal 4: Share the outcomes of the charrette

Session Goals

What is a Charrette?

...a charrette is defined as an intensive workshop in which various stakeholders and experts are brought together to address a particular design issue, from a single building to an entire campus, installation, or park...

Definition

Ingredients:

- Problem or Challenge
- Diverse Stakeholders
- Unlimited Ideas
- Flexible Space
- Visualization Tools
- Structure (time frame, outcome products, next steps)

Recipe for a Charrette

Design Thinking

Design Thinking

...**design thinking** is a process—applicable to all walks of life—of creating new and innovative ideas and solving problems...not limited to a specific industry or area of expertise....

Definition

Design Thinking

Define

What is the Problem set?
Define it by highlighting the key points.
Understand what the problem is, selling, promotion, display or message?
Do you understand what the client is asking?
What type of design, the format (Posters, Digital or printed) and what type of design do they want created (Typography, symbolic ect.) Does the client Understand?
Do they know exactly what format the finalised product will come in?
Do they understand what they are being charged for?
Agreement of Terms, Agree to deadlines, the price average, and what standard of work they expect to receive, and remember it covers your back at the same time! Plans in the Brief Look at the brief, make sure that everything is covered. Check if anything might not work, or is out of your control. Also see if the work needed is possible to do, and cost effective for the client.
Can you manage it? Only you know your talents and limitations, if the workload is something you can take on, and will you finish it to the deadline set?

Research

It is very important to do constant research when creating your brief. It should be the starting point, something to start basing your ideas on. Think about the target audience, what age group, what kind of design represents them? What is appropriate, and what can the audience relate to! Research other designers, see what is up and coming or what is happening in design now. Research also relates to the brief, look at other artists who would do a similar brief, look at the colours, and the finished copy- this can sometimes give you an idea what your end product should look like.

Ideate

This is where you start develop some ideas, take your research, look at what you want to produce, and create some original ideas yourself, this could be rough versions, or fully finished. Gather a few ideas so you can compare the colours or fonts, and a few different design ideas, make sure they are completely different, so the client can have a few options to choose from, remember they may not have the same ideas as you, so make like something which you don't.

Implement

They want to see if the brief has been fulfilled.

Learn

This is the most important part of the whole design process. After the client is happy with the design, and officially signed it off (making sure you provided the correct file type, or completed the brief - check over that you have fully completed all that has been asked of you. Learning what happened through out the design process is the most important because you can understand what you would do differently and if there was any difficulty's during the brief, then you will have learnt how to deal with them in the future. Not all briefs can go to plan, but that is all part of the learning process, the important thing is to learn from the experience. Acknowledging WHY the client chose that particular piece of design can also help you create a style which is unique, and a style that you can sell to clients.

Select

After creating your design, and the variations then it's time to select what designs, and which variations you want to include and present to the client. Be critical on your work. If it doesn't fit the brief, then don't include it. Remember the client will want to see ways that the logo can be presented as well, this maybe t-shirts, or creating billboard mock-ups.

Prototype

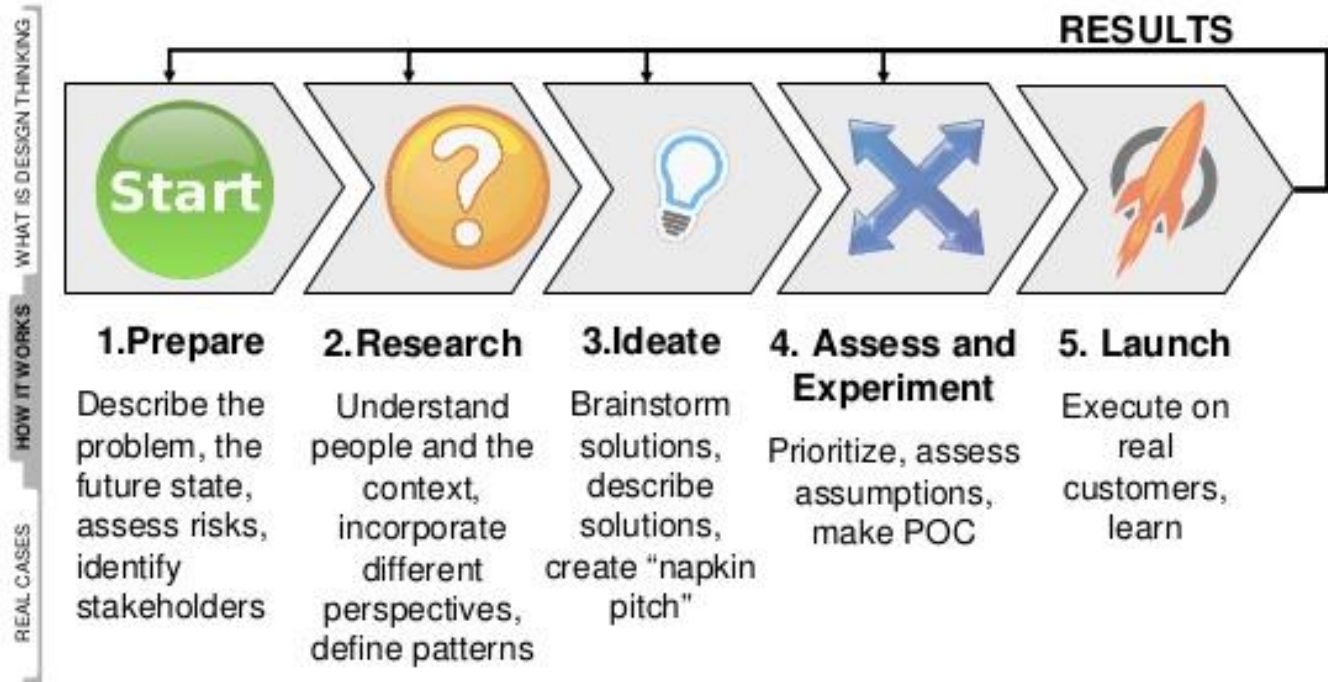

This is when you start looking at your designs, all the variations, and different designs you have. Selecting the few that you want to put forward to your client to choose from, creating many variations of those designs created (on average 3+ different design ideas, not including variations) these will give you a general idea what the client may want also you can see what colours work, or what difference changing the font can make.

expertise model... (Kruger & Cross, 2006)	Design Thinking Models (Tschimmel, 2012)				
	IDEO's 3 I Model	IDEO's HCD Model (Human-Centred Design)	Model of the Hasso-Plattner Institute	4 D / Double Diamond Model (British Design Council)	Service Design Thinking (SDT) Model (Stickdorn and Schneider)
1 Gather data	Inspiration Identify design problem or opportunity. Deliver the design brief to define a common framework. Observe the target group's behaviour in the design task's context.	Hearing Collect stories from people. Prepare and conduct field research.	Understand Gather existing information through secondary research.	Discover, Search for new opportunities, new markets, new information, new trends, insights	Exploration, Understand customer culture and real service problem. Visualize the context. Design the process.
2 Assess value and data validity			Observe Qualitative research: observation, interviews, insights on users' needs	Define, First insights are reviewed, selected and discarded. Initial development of project ideas.	
3 Identify constraints & requirements			Point of View Share insights among the group with storytelling. Synthesize a visual framework of the user's perspective.	Develop Develop and test solutions by multidisciplinary team. Brainstorming, sketches, scenarios, renderings or prototypes	
4 Model behaviour and environment				Creation, Generate, test and improve ideas and concepts	
5 Define problems and possibilities	Ideation Synthesis process. Transforms observations into insights. Brainstorming, visual representations. Insights lead to propositions.	Creating Workshop to translate insights into frameworks, opportunities, solutions and prototypes. Iteration between "abstract" and "concrete"	Ideation Identical to the Ideation of the 3 I model		Reflection Building on ideas and concepts, prototyping - closely related to previous stage
6 Generate partial solutions					
7 Evaluate solutions	Implementation Action plan for selected ideas. Use of Prototyping. Development of a communication strategy.	Delivering Action plan for selected ideas: rapid revenue/cost modelling; assess capability; implementation planning	Prototype Identical to the Implementation of the 3 I model	Deliver. A final concept is taken through final testing, signed-off, produced and launched	Implementation. Communicating and testing the new concept. Improving the prototype.
8 Assemble a coherent solution			Tests Identical to the Implementation of the 3 I model		

Design Thinking Model: Example #1

The Design Thinking “5 stages” process

Co-creative ideation is followed by exploration that focuses on both qualitative and quantitative validation

Idea

Generate fresh ideas to tackle critical business challenges

User research

- User studies
- Diary studies
- Photographic investigation
- Ethnographic studies
- Surveys

Model Generation

- Business canvas
- Startup canvas
- Change canvas

Design Thinking

- Empathy Maps
- Directed storytelling
- Elito method
- etc.

Explore

Explore first using qualitative methods...

...then using quantitative methods

Research and explore in order to refine assumptions into measurable hypotheses

User Centered Design

- User personas & journeys
- User Goals & Tasks
- etc

Customer Development

- Customer/Problem Fit interviews (Problem Exploration)
- Problem/Solution Fit interviews (The Mafia Offer)

Data Analytics

- Segmentation
- Market
- Customer Lifecycle
- Predictive

User Testing

- Competitor testing

Design Thinking Model: Example #3

DESIGN THINKING QUESTIONS

DESIGN THINKING is a human-centered approach to identifying and solving a wide range of problems, built on collaboration, creativity, and empathic understanding of human experience. The diagram below represents the iterative process of exploration and creation to finding solutions that are useful, usable, and delightful.

DEFINE What are we trying to solve? How we define the challenge has a big impact on what we do next. Be precise in your words, and frame the question as, "How might we ...?"

Questions to get started:

- WHAT ARE OUR LONG-TERM GOALS?
- WHAT ARE OUR IMMEDIATE GOALS?
- WHO ARE WE DOING THIS FOR?
- WHAT ARE OUR CRITERIA FOR SUCCESS?

LEARN How might we discover the needs of those we are designing for? Gain understanding and empathy by observing, listening to stories, and studying the world around you.

Questions to get started:

- WHOSE CAN WE GET RESPONSE?
- WHO CAN WE LEARN FROM?
- WHAT IS THE LARGER CONTEXT?
- WHAT'S ALREADY BEEN DONE?

IDEATE How do you come up with new ideas? Collaborative creativity is at the heart of innovation. You need clear rules, a facilitator, space for displaying ideas, and an inspiring environment.

Questions to get started:

- WHAT TOPICS SHOULD WE EXPLORE?
- WHO WILL LEAD THE SESSION?
- WHO DO WE WANT TO PARTICIPATE?
- WHAT WILL WE DO WITH THE IDEAS?

TEST How can we best evaluate our ideas? By embracing both failure and success, rapid prototyping and experimentation is a way of life, and "thinking by doing" accelerates our best ideas.

Questions to get started:

- WHAT CAN WE PROTOTYPE QUICKLY?
- WHOSE FEEDBACK DO WE WANT?
- WHAT QUESTIONS CAN OUR PROTOTYPE ANSWER?
- WHAT ASSUMPTIONS HAVE WE MADE?

REFLECT How do we learn and improve? Pausing for reflection creates opportunities for insight and connections. Make time to reflect; it will be the best thing you do.

Questions to get started:

- WHAT DID WE LEARN?
- WHAT WAS MOST SIGNIFICANT FOR US?
- HOW MIGHT WE DO IT DIFFERENTLY?
- HOW DO WE FEEL ABOUT OUR WORK?

SHARE How do we best communicate our concepts? A good story helps colleagues and customers understand ideas, build consensus, and provide valuable feedback for future growth.

Questions to get started:

- WHO ARE WE PRESENTING TO?
- WHAT STORY DO WE WANT TO TELL?
- WHO IS THE HERO OF OUR STORY?
- WHAT ARE OUR MAIN POINTS?

Design Thinking Model: Example #4

Design Thinking Approach for Project Work @ YPS

- According to the Design Management Institute (DMI) **design-led** organizations outperform other organizations by 93%, validating the critical nature and impact of design thinking on performance and productivity (2013)

- Value in discovery and visualization (Owen, 2006)

Applying Design Thinking

Discovery

Visualization

Design Process

The learning environment should result from a planning and design process that involves all community interests.

Community Engagement Shaping the Environment

“Schools are more than just bricks and mortar;

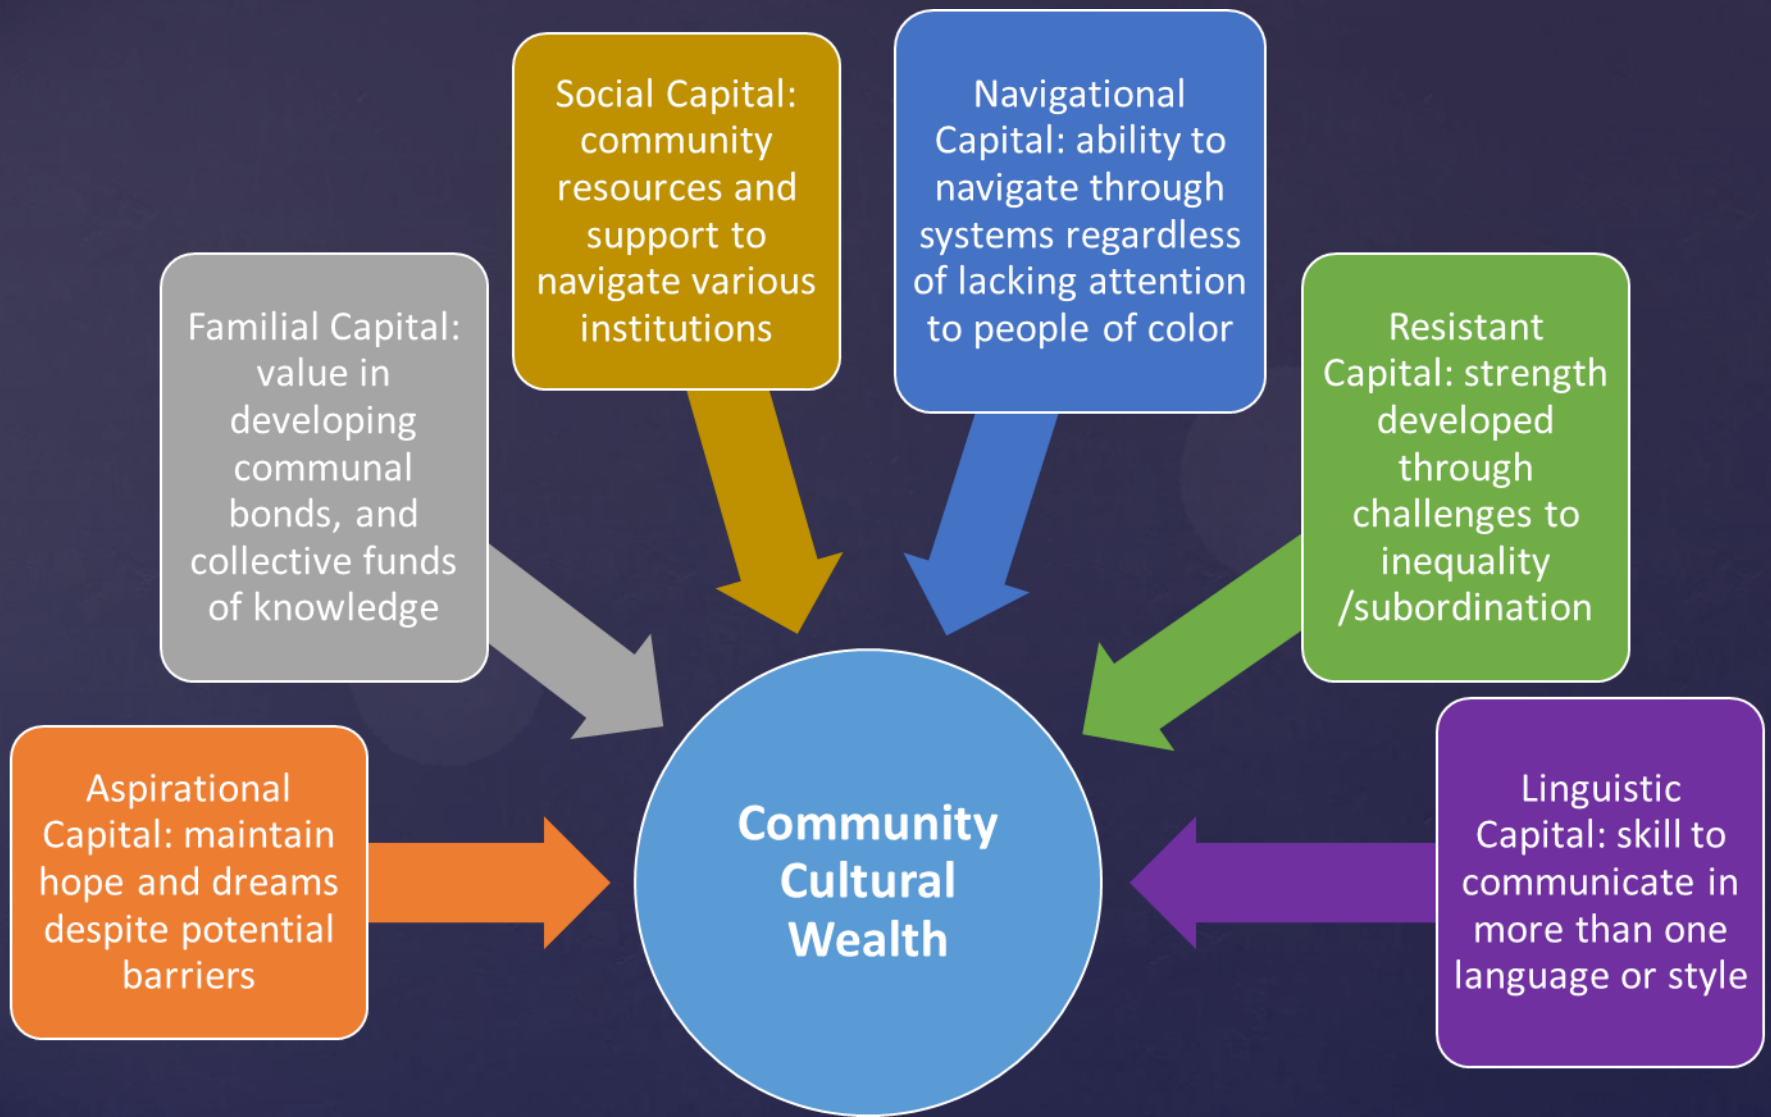

...they are about visions for neighborhoods,
communities and our state”

- 
- Creativity and innovation
 - Enhance teaching + learning accommodating diverse needs of all learners
 - Serve as a center for the community
 - Engage stakeholders (students, educators, community) in planning + design thinking process
 - Provide for health + wellness, safety + security
 - Make effective use of available resources and
 - Be flexible, adaptable & sustainable

Addressing Needs of 21st Century Students

Guiding Principles: Community Cultural Wealth

Diverse Stakeholders at the Table

1. What is the **issue** you are trying to address?
2. What are the **guiding principles** or values of your organization and how can you relay these to the charrette participants?
3. Who are your **stakeholders**? Consider those who will use your services, who will fund your services, community members, and those who influence policy.
4. **Where** should you hold the charrette? (Consider the needs of your stakeholders. For example, if your stakeholders are low-income individuals, maybe the event should be in a location they can walk to or take public transportation to. On the other hand, if your primary stakeholders are policy makers, the charrette needs to be in a location convenient to their jobs. How can you accommodate all of your stakeholders' needs?)
5. What do you need to make your participants feel **comfortable sharing** their ideas? (Think about the culture of your target community, what environmental characteristics will make them feel their opinions matter, how can you be culturally competent, do you need to provide meals or snacks?)

Factors in Developing Your Own Charrette (p.1)

- Who will **facilitate** the charrette? (Who knows the culture of your organization well enough to relay that to the charrette participants and can induce energy in your participants encouraging them to participate and understand the value of their feedback?)
- What kind of **experts** do you need to support the development process on the day of the charrette? (Consider the key issues you are addressing, might it be helpful to have educators, community members, prior/current staff members, or students serve as experts to consult during the charrette process?)
- What **information** do your charrette participants need to successfully complete the task at hand? What types of handouts or presentations (live presentations or videos from TED talks, YouTube, podcasts, etc.) would help your charrette participants complete the task?
- What information do you want to know **before and after** the charrette? Would a pre-survey be informative for your big day? Is there any information you would like to collect after the charrette (through a post-survey)?

Factors in Developing Your Own Charrette (p.2)

- 
- opportunities
 - On site student transition
 - Grants, research + student funding

Guiding Principles: Charrette Guidelines

- Utilization of grounds for observation/research/learning/meetings
- Reintroduction of native species + wildlife
- Outdoor labs
- Student designed projects capture: kinetic sculptures, waterfalls, ponds, etc.
- Community gym, sports, fields
- Joint ventures with B/G Clubs, etc.
- Funding, financial & sustainability opportunities

XQ Green School

Concept

A flashlight allows for illumination and safe guided travel through the unknown.
Highlighted objects become magnified, examined and ultimately familiar.

Problem Statement

We have become increasingly removed from the way our food is grown, the resources that food production requires and the nutritional information needed for healthy lives.
None of us would argue that food is not among the most important factors in any life, however far too many of us have lost a meaningful connection with our food.

Solution

We will connect the Montbello community and Green School's students and staff to the joys of great food. We will guide students by teaching agricultural techniques tailored to their environment, cooking classes that focus on nutrition and experimentation and finally by providing meals to as many as possible in a safe and lively place. Creating and illuminating these pathways will lead our kids and community back to each other and the wide world of food.

Sustainable Features

Energy Recovery Filter System

Greenheck's Energy Recovery System is designed for use over cooking equipment producing heat and grease laden effluent (Type 1 hood). The ERHS allows you to capture waste heat from your exhaust air-stream and pre-heat your incoming cold water supply before it enters the hot water heater. The temperature differential also allows more grease to condense and be removed from the air-stream which leads to better capture and a reduction in hood and duct cleanings. (greenheck.com)

Commercial Composting

Richard Meier building particle-eating concrete

Several companies are developing anti-polluting products that can be used in building facades, paint, plaster and paving materials. Extensive testing has determined that construction products containing titanium dioxide helps to destroy pollutants found in car exhaust and heating emissions. Another benefit of these materials is that they essentially clean themselves, minimizing the need for maintenance. Titanium dioxide has photocatalytic properties: sunlight sets off a chemical reaction that accelerates natural oxidation and helps to break down nitrogen oxides emitted in the burning of fossil fuels. (NYTimes.com)

Living Wall Plumbing Section

The benefits of having living walls indoors are numerous. Living walls add tremendous aesthetic value as living works of art. Indoor plants cool their environment by way of transpiration and increase indoor air quality and provide energy savings by helping to cool indoor spaces by 3-7 degrees C. They also mitigate glare and the urban heat island effect. Living walls act as acoustic barriers that dampen noise pollution and promote health and wellness. Studies have shown that even having a view of greenery increases workplace productivity. (greenvetrey.com)

School Lunch

The myth of the value meal

The loss of a social family

The public health

VS

The Hunger-Free Kids Act of 2010 attempts to address many of the child nutrition issues and the modern American diet. The legislation authorizes funding and sets policy for the USDA's core child nutrition programs and expanded food programs.

The policies have gradually been implemented and in 2014 have been in full effect with mixed results. Many schools, 47% of those polled, report that school lunch numbers are down significantly and that no school has yet met the updated nutrition standards, which include that 100% of the grains be whole grain rich, far lower sodium in food across the board and the Smart Snacks in Schools rule, which limits the calories, fat, sodium, and portion sizes for food and beverages sold in school vending machines and snack bars.

Researchers from Cornell and Brigham Young Universities published a study in *Public Health* and Nutrition showing that the mandate to serve a fruit and vegetable with each school meal results in a nearly 100% increase in waste with about \$3.8 million worth of produce being thrown in the trash each day, or \$684 million a year.

So what does this mean for XQ? Starting at school age is too late because studies show that we develop our food preferences in the first two years of our lives and the reality is that kids eat what their parents eat.
